Chapter 9 Issues Fixed

V3000 Issues:

1. Fixed SFP+ (Optical) module Hot plug not detecting with 10G speed.

Chapter 10 Known Issues/Limitations

R2000 Issues:

2. Stutter observed for video playback through chromium browser.
3. Glitches observed with zoom calls on 3x4k/1080p display configuration.
4. Lag observed with Microsoft Teams® video conference, PPT, browser on 3x4k display configuration.
5. Stutter and lag observed with 4k videoplay back with thin client config.
6. Stutter observed at times on secondary displays with 3x4k config.
7. One of the displays goes blank after boot with 3xTrue 2K MST configuration.
8. Sporadically Type C to Type C Hot plug fails.
9. Minor stutter observed at times with vaapi playback with MST-4K@30hz.

V3000 Issues:

1. Use Ethernet DAC cable of length ≤ 5 meters.
2. UART provisioned for 1 x4 wire and 4 x2 wire modes only
3. On Fox RJ45 and 2.5G or 1G speed selection in BIOS, hot-plug and hot-insert of cable always triggering speed switching to 10G. Issue specific to V3C18i OPN.
4. Ethernet feature not supported in this release:
 - a. PPS not enabled.
5. Ethernet stability issues
 - a. AIC1 InPhi Phy 10G link stability issue in P2P mode only; mitigating with switch as link partner instead of another Fox
 - b. Link detection issues on SFP Port 0/1 for 1G speed with FS copper module (SFP-GB-GE-T 1000BASE-T) with Cat 5 UTP cable
 - c. Link up failure issue after S3 on SFP+ Connector, with 1G/100M/10M as speed and 1G Bel modules connected on both the ports
 - d. Link up issues after S3 on AIC2-1G-BaseT phy ports
6. Refer “FOX Platform User Guide (ID: 57102)” from <https://devhub.amd.com/reference-platform/fox/> for USB-C J60 port, RJ45, AIC1, AIC2 and AIC3 rework details

Common Issues:

1. Few of the display blank out with MST hub in 5.4 kernel.
 2. Few of the VulkanCTS 1.2 test cases fails with error of VK_ERROR_OUT_OF_HOST_MEMORY.
-

- [Workaround]: Vulkan CTS 1.1.3 works fine.
3. IO Page fault logs observed while loading the I2S module.
 4. HP Z27s monitor resolution change does not take effect sometimes.
Recommendation: Not to use the monitor since the monitor issues HPD pulse during Changing resolution causing to revert to previous/native resolution sometimes.
 5. Hotplug root node of DP MST monitors in daisy chain or via Hub fails.
Workaround: To always connect or disconnect monitors in MST configuration one by one and not at root node level.
 6. All MST displays goes blank while booting with MST Hub and MST off on the monitors.
 7. Tearing/Stutter observed during 4k@60fps playback on 2x4k monitors.
Workaround: Use zaphord Head configuration to play 4k@60fps video on multi monitor setup.
 8. Hard hang observed for Piglit tests.
Workaround: Piglit test passed without arb_tessellation_shader-tes-gs-max-output test cases.
 9. Stuttering observed with glmark2 on mGPU config.
Workaround: Use multi screen configuration to resolve the stutter.
 10. [BE]: Observed Issues with HotPlug on Bald Eagle.
 11. [BE]: S3 Fails randomly on BaldEagle with IOMMU enabled.
 12. Issues with refresh rate change/rotate using xrandr command.
 13. Export MESA_GLES_VERSION_OVERRIDE=3.2 to run OGL ES 3.2 CTS.
 14. Hot plug results in blank display of one of the monitors when using startx mode.
 15. B-frame support is not available in vaapi encode.
 16. MF has limitation of displaying 2 – 4K monitors, 3rd 4 K monitor will not get displayed.
 17. Following OGL CTS test cases do not work
 - a. GL45-CTS.stencil_texturing.functional
 - b. GL45-CTS.multi_bind.dispatch_bind_textures
 - c. GL45-CTS.multi_bind.dispatch_bind_image_textures
 - d. GL45-CTS.arrays_of_arrays_gl.SubroutineFunctionCalls2
 - e. GL45-CTS.sparse_buffer_tests.BufferStorageTest
 - f. GL45-CTS.shader_atomic_counters.basic-usage-fs
 - g. GL45-CTS.shader_atomic_counters.basic-usage-vs
 - h. GL45-CTS.shader_atomic_counters.basic-usage-gs
 - i. GL45-CTS.shader_atomic_counters.basic-usage-tes
 - j. GL45-CTS.shader_atomic_counters.basic-usage-cs
 - k. GL45-CTS.parallel_shader_compile.CompilationCompletionNonParallelTest
 - l. GL45-CTS.parallel_shader_compile.CompilationCompletionParallelTest
 - m. GL45-CTS.enhanced_layouts.ssb_member_offset_and_align
 - n. GL45-CTS.enhanced_layouts.vertex_attrib_locations
 - o. GL45-CTS.parallel_shader_compile.MaxShaderCompileThreadsTest

XGBE:

1. [XGBE]: Force mode(Auto negotiation disabled) is not supported in RJ45.
2. Can't concurrently enable SFP+ and RJ45 interfaces.
3. No receive Split header support.

Below is the type of SFP/RJ45 modules used in the XGBE validation of this release.

Type	Model	Part Number
1G SFP - RJ45	BEL	SFP-1GBT-06
1G SFP - RJ45	Finisar	FCLF8521P2BTL
10G SFP+ passive direct cable	Finisar	F17CC004893
10G SFP optical	Finisar	FTLX8574D3BCL
10G SFP optical	Finisar	FTLX851D3BCL
10G SFP optical	Intel	E10G42BTDABLK
10G SFP optical	Intel	AFBR-709DMZ-IN2

Third Party Issues/Limitations:

1. Terminal switching results in hard hang randomly. Issue root caused gnome which is third party component.
<https://bugs.launchpad.net/ubuntu/+source/gdm3/+bug/1758512> .
2. Switching to console mode upon hotplug results in soft hang. Issue root caused gnome which is third party component.
<https://bugs.launchpad.net/ubuntu/+source/gdm3/+bug/1758512> .
3. Stutter can be observed when stream framerate and monitor refresh rate are different. This is expected phenomenon. Stutter can be minimized with interpolation option in mpv. But it can introduce corruption and other side effects.

Troubleshooting

The user-space components are selected with the best possible availability of stable components at the time of release.

The user-space components are available to the users through open source policy. Please be advised to upgrade the open source user-space components as per need and resolution through latest user-space.

The Embedded release for open source component is based on Ubuntu 18.04.1 distribution.

Here are a few troubleshoot pointers for resolution for non-amdgpu components.

1. In multi-GPU use-case, a monitor connected to APU doesn't come up while boot during multiscreen rendering. The monitor connect to dGPU loads correctly.

This issue happens because of gnome desktop environment used by 18.04.1. The gnome desktop environment does not support multi-screen configuration. To fix this issue, use XFCE desktop environment.

2. dmesg points to “Bandwidth validation fails”, one of the monitors gets blackout after connecting more than 2 - 4K monitors on MF
When display load fails the bandwidth validation, there is no fallback mechanism provided through the Linux OS. Under such situation, customers can reduce the refresh rates or resolution of monitor for the getting the monitor lightup.
3. Unigine Heaven Pro shows white screen
Follow the following steps to allow GLSL #extension directives in the middle of shaders

1. Install driconf (sudo apt-get install driconf)
2. Run driconf (sudo driconf)
3. In application settings add Unigine heaven if it does not exist (application name: Unigine Heaven, Executable name: heaven_x64)
4. Add: Allow GLSL #extension directives in the middle of shaders: Yes (using "add setting" button. You can remove all other settings if present)
5. Retry unigine heaven

4. Suspend/Resume with and without playback
Use systemctl suspend rather than pm-suspend.

Below link suggests the usage of systemctl suspend.

<https://askubuntu.com/questions/1792/how-can-i-suspend-hibernate-from-command-line>
